MUNRO

Leather-effect fabric

Munro brings a softer leather-effect finish to the Ambla collection, with a lightly weathered appearance that feels relaxed, tactile and quietly distinctive.

Its surface has a finely broken, mottled character that gives the range more movement and tonal variation than a cleaner plain grain. Rather than reading as polished or formal, Munro feels more natural and gently aged in appearance, adding depth and texture in a way that remains subtle and easy to place across a scheme. The result is a leather-effect upholstery surface with a softer, more relaxed character, while still feeling balanced and considered.

ambla®

IMPORTANT INFORMATION

PERFORMANCE

Ambla is manufactured to meet demanding criteria such as high wear resistance, needed in public areas and commercial/contract upholstery applications.

PROTECTION

Ambla fabrics contains active ingredients that protect against the growth and spread of mould and mildew. This is not a surface treatment and therefore Ambla retains its effectiveness even after regular cleaning. Ambla resists bacterial & mould growth even after 5 years of heavy commercial use, cleaned every day (tested to ISO 846) and is ideal for environments where hygiene and cleanliness are important.

TECHNICAL INFORMATION

Tested in accordance with BS 5790 Part 1 1996 & ISO7617-1:2001. Quality systems approved to ISO 9001, IATF 16949 and MED Module D and Environmental system approved to ISO 14001.

Martindale abrasion in excess of 1 million rubs.

FLAME RETARDANCY

BS5852: 2006 Ignition Source 0 and 1 when tested in combination with CMHR35 foam.

BS5852: 2006: Clause 11 Ignition Source 5 (Crib 5) when tested in combination with CMHR35 foam.

ISO 8191-1 1987 smouldering cigarette
ISO 8191-2 1988 match flame

BS7176: 2007 for Medium Hazard applications.
BS EN 1021-1: 2006: Part 1 smouldering cigarette
BS EN 1021-2: 2006: Part 2 match flame
BS 5852 2006: Clause 11 Ignition Source 5

IMO Resolution MSC 307 (88) (2010 FTP Code): Annex 1 Part 8
FAR/JAR Part 25: App. F Part 1 (Vertical Test) / EASA CS.25.853 (Amendment 21)

CLEANING & MAINTENANCE

Ambla should be cleaned regularly to prevent build up of soiling and to retain its appearance.

Clean with a damp, soapy cloth and rinse well with clean water. Dry the surface thoroughly.

A soft brush with soapy water may be used to remove stubborn stains. Ensure surfaces are then rinsed and dried.

Disinfectants may be used in dilution as specified by their manufacturers. This includes Haz-tabs and other disinfectants commonly used in hospital infection control programmes.

Actichlor tablets should be fine as long as the manufacturers' instructions are followed.

With regard to chlorine releasing agents' levels of 1 - 10,000 parts per million should pose no problems as long as the material does not endure long soakings at the higher concentrations

Ambla surfaces are NaDCC compatible. Ensure surfaces are then rinsed with clean water and dried thoroughly.

Tests in our laboratory show that the earlier any stains are removed the better.
